

Head-Up Display Packaging

as a foam solution

The custom-made packaging was specifically designed for the safe transport of sensitive head-up displays. The component is securely held in place between a precisely shaped bottom and top insert made of antistatic PE foam (Stratocell S). An antistatic PE box cover encloses the entire PE foam block, and the product is shipped in a sturdy corrugated cardboard box (FEFCO 0201).

Your benefits

- / Reliable product protection through a clamping mechanism between the bottom and top liners
- / Excellent resilience of PE foam combined with shock-absorbing properties
- / Precise cutting using waterjet cutting technology and automated welding
- / Antistatic protection
- / Suitable for individual shipping
- / Lightweight packaging material
- / Stratocell S Antistatic is recyclable and can be returned to the recycling cycle
