

Head-Up Display Packaging

as a corrugated cardboard solution

The custom-made packaging was specifically designed for the safe transport of sensitive head-up displays. The component is held in place by clamping between the holder and the down-holder and is additionally secured by two corrugated cardboard wraps on the ends. An antistatic PE box cover protects the entire holder, and the product is shipped in a sturdy corrugated cardboard folding box (FEFCO 0201).

Your benefits

- / Reliable product protection provided by a clamping mechanism between the holder and the down-holder
- / Additional stability provided by corrugated cardboard wraps on the ends
- / Antistatic protection provided by a PE box cover
- / Guaranteed shock absorption of approximately 40G for global pallet shipping
- / Particularly sustainable due to the excellent recyclability of corrugated cardboard
