

# Cleanroom packaging

for components in the semiconductor industry

The cleanroom packaging was specially developed for sensitive components in the semiconductor industry and meets the most stringent requirements for cleanliness and product protection. The solution consists of a plastic container with precisely fitted PE foam inserts. The necessary components are cleaned in accordance with cleanroom class 6 as per DIN ISO 14644-1 and double-sealed in antistatic Dry-Shield bags.

## Your advantages

- / Cleanroom-compatible packaging in accordance with ISO Class 6
- / Double sealed in antistatic protective bag
- / Customised foam inlays
- / Protection against transport stresses
- / Recyclable material
- / Modular design enables separation by type
