

Technical chassis for mounting device components

made of EPP

This EPP molded part is the internal mounting system for a fuel cell. It holds all the important components securely in place. Its clever design makes assembly easier and faster. At the same time, it reliably protects the sensitive technology from impact and helps to dissipate heat. It is lightweight, durable, and combines many functions in a single, sustainable part.

Your advantages

- / Simple and quick assembly and disassembly
- / Mono material
- / Effective protection against impacts
- / The material and the design support cooling
- / Lightweight and stable
- / Available in flame-retardant (FR) design
- / Recyclable
